causality and mind presents seventeen of nicholas jolley s essays on early modern philosophy which focus on two main themes one theme is the continuing debate over the nature of causality in the period from descartes to hume jolley shows that despite his revolutionary stance descartes did no serious re thinking about causality it was left to his unorthodox disciple malebranche to argue that there is no place for natural causality in the new mechanistic picture of the physical world several essays explore critical reactions to malebranche s occasionalism in the writings of leibniz berkeley and hume and show how in their different ways leibniz and hume respond to malebranche by re instating the traditional view that science is the search for causes a second theme of the volume is the set of issues posed by descartes innovations in the philosophy of mind it is argued that malebranche is once again a pivotal figure in opposition to descartes malebranche insists that ideas the objects of thought are not psychological but abstract entities he thus opposes descartes dustbin theory of the mind malebranche also challenges descartes assumption that intentionality is a mark of the mental and his commitment to the superiority of self knowledge over knowledge of body other essays discuss the debate over innate ideas locke s polemics against descartes theory of mind and the issue of leibniz s phenomenalism a major aim of the volume is to show that philosophers in the period are systematic critics of their contemporaries and predecessors

the matter of the mind addresses and illuminates the relationship between psychology and neuroscience by focusing on the topic of reduction written by leading philosophers in the field discusses recent theorizing in the mind brain sciences and reviews and weighs the evidence in favour of reductionism against the backdrop of recent important advances within psychology and the neurosciences collects the latest work on central topics where neuroscience is now making inroads in traditional psychological terrain such as adaptive behaviour reward systems consciousness and social cognition

preface the author of this very practical treatise on scotch loch fishing desires clearly that it may be of use to all who had it he does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible everything in the way of the history and habits of fish has been studiously avoided and technicalities have been used as sparingly as possible the writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general this section is interleaved with blank sheets for the readers notes the author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition we do not pretend to write or enlarge upon a new subject much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that

on the whole a days loch fishing is the most convenient one great matter is that the loch fisher is depend ent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best a common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from the bow of the same boat of all the absurd beliefs as to loch fishing this is one of the most absurd try it give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance again it is said that the boatman has as much to do with catching trout in a loch as the angler well we dont deny that in an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing

donald olding hebb referred to by american psychologist as one of the 20th century s most eminent and influential theorists in the realm of brain function and behavior contributes greatly to the understanding of mind and thought in essays on mind his objective was to learn about thought which he considered the central problem of psychology but also not less important to learn how to think clearly about thought which is philosophy the volume is written for advanced undergraduates graduates professionals and lay people interested in or studying the mind hebb offers an increased understanding of the mind from a biological perspective that affects long standing philosophical and psychological problems psychology and philosophy were divorced some time ago but like other divorced couples they still have problems in common writes hebb the first three chapters establish the methodological and philosophical basis for his biologically centered theory of behavior including the evolution of the mind nature versus nurture the origination and status of cell assembly theory and infant thought and language development he concludes with a discussion of the workings of scientific thought from a practical rather than theoretical perspective
